

Installing the Tidebreak™ Client (Windows)

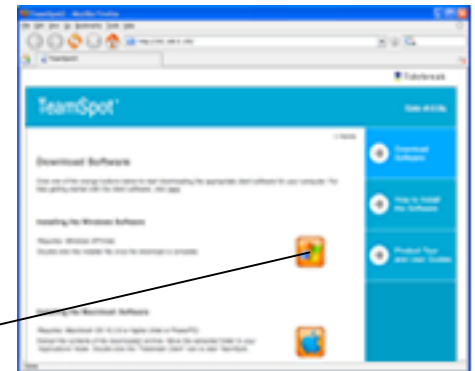

1 Determine the URL of the Host computer

The address of the Host is typically posted prominently in the area.

2 Go to the Host's webpage

On your computer, open a web browser window. Enter the URL from step 1. Click "Download Software."

Click here for the download page.

3 Download the software

Click the orange Windows button to download the Client installer file.

Click to download the installer.

4 Install and run the Client software

Run the installer you just downloaded. At the end, double-click the Tidebreak Client. When the license agreement appears, select "I accept..." and then click "Continue."

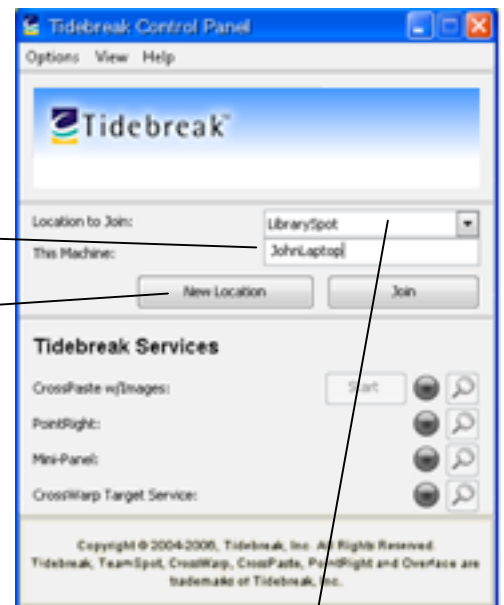

5 Personalize your settings in the Control Panel

The Tidebreak Client Control Panel will appear. Change the machine name to be something that uniquely identifies you (e.g. a nickname). Then click "New Location" to join into the Host.

Change this name to better identify you to others during the session. (No spaces or punctuation.)

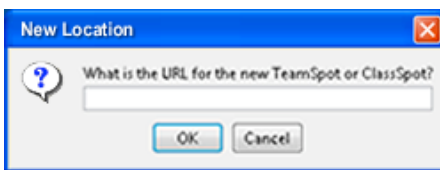

Then click here to join the session.

Drop-down list of past locations.

6 Enter the Host's URL again

Enter the URL from step 1 here and click "OK." This connects you to the Host computer.

7 Enter the authorization code

Check the Host's screen in the room. You should see a small box in the lower right corner with a six digit code. Enter that code into this panel and click "OK." Once the Control Panel minimizes itself, you're connected.

8 Next time, just click "Join"

Next time you visit the installation, select the Host's name from the drop-down list and click "Join." When visiting an installation not in the list, click "New Location" and repeat steps 6 & 7.
